
Electronegativity: observed response, mean and upper envelope
Co-Mo
Co-Ni
Co-V
Fe-Ni
Initial screening | precursor | n=496
Initial screening | icp | n=496
BO: 4 metal pairs | precursor | n=84
BO: 4 metal pairs | icp | n=84
H/D separation coefficient
Nominal precursor-weighted electronegativity
ICP-weighted electronegativity
Binned mean
Binned 90th percentile
Unconstrained quadratic mean
Same complete observations in both columns; no descriptor imputation. Dotted line: historical 1.85 reference, not a fitted optimum.
